#### Search Notes

Examiner Portner,

Here are the results of the search you requested.

Please feel free to contact me if you have any questions.

**Toby Port** 

# STIC SEARCH RESULTS FEEDBACK FORM

### Biolegit Chem Library

Questions about the scope or the results of the search? Contact the searcher or contact:

Mary Hale, Information Branch Supervisor 571-272-2507 Remsen E01 D86

> I am an examiner in Workgroup: Example: 1610
Relevant prior art found, search results used as follows:
☐ 102 rejection
☐ 103 rejection
Cited as being of interest.
Helped examiner better understand the invention.
Helped examiner better understand the state of the art in their technology.
Types of relevant prior art found:
☐ Foreign Patent(s)
<ul> <li>Non-Patent Literature         (journal articles, conference proceedings, new product announcements etc.)</li> </ul>
> Relevant prior art not found:
Results verified the lack of relevant prior art (helped determine patentability).
Results were not useful in determining patentability or understanding the invention.
Comments:

Drop off or send completed forms to STIC/Biotech-Chem Library Remsen Bldg.

STIC-Biotech/ChemLib

09/545,199 Subject:

Please search SEQ ID NO 4, and back translate the amino acid to the corresponding nucleotide sequence. The claims recite 70% identity to a nucleotide sequence that encodes SEQ Id NO 4. Thanks

DB 3; Length 289; 100.0%; Score 1429;

The family Pasteurellaceae encompasses several pathogens that infect a wide variety of animals. The present invention relates to virulence genes from Pasteurellaceae. The present sequence is a protein encoded by one such virulence genes of the present invention may be mutated in order to produce an inactive gene. The inactive virulence gene may in turn be used to produce a vaccine, which is useful for treating bacterial infections such as septicemias, bronchopneumonias, rhinitis and

                                                                                                                                                                                                                                                 240
                                                                                                                                                                                                                                                                 The present invention describes a gram-negative bacteria comprising a mutation in a gane, where the mutation results in decreased activity of a gene product encoded by the mutated gene. Also described is a method for producting a gram-negative bacteria mutant or an attenuated pasteur-claceae bacteria. The mutated genes have antibacterial activity pasteur-claceae bacteria. The mutated genes have antibacterial activity pasteur-claceae bacteria on be used as vaccines in the fields of human edicine or veterinary medicine, and for identifying new antibacterial ABQ83578 and ABDS4473 to ABDS451 represents sequences used in the correct of the present invention. ```
The family Pasteurellaceae encompasses several pathogens that infect a wide variety of animals. The present invention relates to virulence genes from Pasteurellaceae. The present sequence is a protein encoded by one such virulence gene. The virulence genes of the present invention may be mutated in order to produce an inactive gene. The inactive virulence gene may in turn be used to produce a vaccine, which is useful for treating bacterial infections such as septicemias, bronchopneumonias, rhinitis and
                                                                                                                                                                                                                    Attenuated Pasteurellaceae bacteria comprising mutations in virulence genes, useful as a live attenuated vaccine against bacterial infections.

The present invention describes a gram-negative bacteria comprising a mutation in a gene, where the mutation results in decreased activity of a gene product encoded by the mutated gene. Also described is a method for producting a gram-negative bacteria matant or an attenuated and can be used in vaccines. The gram-negative bacteria or the attenuated pasteurellaceae bacteria can be used as vaccines in the fields of human medicine or veterinary medicine, and for identifying new antibacterial agents that target the virulence genes and their products. ABQ83458 to ABQ83578 and ABPS4473 to ABPS4551 represents sequences used in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New mutant gram-negative bacteria, useful as vaccines and for identifying
new anti-bacterial agents that target virulence genes and their products.

ABP54547
```

The present invention describes a gram-negative bacteria comprising a mutation in a gene, where the mutation results in decreased activity of a gene product encoded by the mutated gene. Also described is a method for producting a gram-negative bacteria mutant or an attenuated and can be used in vaccines. The gram-negative bacteria or the attenuated and can be used in vaccines. The gram-negative bacteria or the attenuated medicine or veterinary medicine, and for identifying new antibacterial activity which is that target the virulence genes and their products. ```

The invention relates to the isolation of genes and their encoded proteins from Photorhabdus luminescens. The isolated sequences are sources of probes and primers for detecting the genome of P. Luminescens and related species; to study polymorphisms; for gene analysis and for detection/amplification of the genes. Antibodies (Ab) raised against the

```
polypeptides encoded by the genes are used for detection/identification of P. luminescens, e.g. in foods. The genes, proteins, Ab and cells that carry a gene-containing vector are used to select compounds that the dense in plants, animals or microorganisms other than P. luminescens and are able to alter response or sensitivity to toxins and antibiotics produced by P. Luminescens. Cells transformed to express the genes are useful for recombinant production of the proteins, particularly toxins and antibacterials useful as insecticides, bactericides and fungicides. The genes and Ab are also useful that carried to P. luminescens-encoded toxins or antibiotics) and as the appeautically (to treat microbial infection by bacteria or fungi that the pense sensitive to P. luminescens-encoded toxins or antibiotics) and as biopesticides. Other uses of the genes and the proteins are as virulence factors and for identifying targets of human diseases for which P. Comminescens is a model (particularly plaque and whooping cough). This sequence represents one of the isolated P. luminescens proteins

120 The invention relates to new Proteus mirabilis polypeptides and polynucleotides. The invention also relates to antibodies against the polypeptides, methods for producing the polypeptides, a method of enterting vaccines for immunising an individual against P. mirabilis, a method for evaluating a compound for the ability to bind a P. mirabilis, polypeptide and method for screening test compounds for anti-bacterial activity. The polypeptides and polymucleotides are useful as molecular targets for diagnosing, preventing and treating pathological conditions resulting from bacterial infection, as reagents for diagnosis of bacterial diseases, as components of antibacterial vaccines, as targets for antibacterial drugs or as bio-control agents for plants. This sequence represents a proteus mirabilis polypeptide of the invention. 121 KSINFFQSLGIKILTQDSGIGDTPSVEQLIGSVNSMIDAYKKGEVDVVYLVYNKFINTMS 180 5 MACAKEIRSKIASVQNIQKIIKAMEMVAASKORKIQERMAASRPYAETMRSVIGHLALGN 64 1 MAGAKEIRTKIASVKSTQKITKAMEMVAASKWRKTQERMSSSRPYSETIRNVISHVSKAT IGYXHPFLVDREVKKVGMIVVSTDRGLCGGLNVNLFKTVLNEMKEWKEKDVSVQLSLIGS QKPVLEKLIPLPELDNDELGERKQVWDYIYEPDAKVLLDNLLVRYLESQVYQAAVENLAS New Proteus mirabilis polypeptides and polymucleotides, useful as reagents for diagnosis of bacterial disease, as components of antibacterial vaccines, as targets for antibacterial drugs, or as biocontrol agents for plants. .. 70.3%; Score 1004; DB 7; Length 291; 67.1%; Pred. The present invention describes a purified or isolated nucleic acid
sequence (I) consisting essentially of one of the 93 nuclectic acid
sequence (I) consisting essentially of one of the 93 nuclectic acid in a
microorganism is capable of inhibiting proliferation of a microorganism.

(I) have antibacterial and antibiotic activities, and can be used in gene
thereby. Expression of (I) in a microorganism inhibits proliferation of
the microorganism, and the manufactured antibiotic is useful for reducing
the activity or level of a gene product required for proliferation of a
microorganism in a subject, specifically humans. The nucleic acids that
inhibit bacterial growth or proliferation can be used as antisense
therapeutics for killing bacteria. In addition to therapeutic
capplications, the nucleic acid sequences complementary to sequences
complications, the nucleic acid sequences complementary to sequences
complications, the nucleic acid sequences complementary to proliferation-required sequences
complementary to proliferation and be used as disponent color particular microorganisms can be used as
probes to identify particular microorganisms can be used as
probes to identify particular microorganism species in clinical
specimens. AAH81295 to AAH81487 and AAH81491 represent
invention

Novel nucleic acids encoding proteins required for Escherichia proliferation, useful for screening for antimicrobial agents.

Klebsiella pneumoniae.

```
The invention describes a new isolated nucleic acid encoding a Klebsiella pneumoniae polypeptide. Also described are: a recombinant expression vector comprising the nucleic acid, operably linked to a transcription regulatory element; and a cell comprising the recombinant expression vector. The nucleic acid is useful for preparing a vaccine composition against Klebsiella pneumoniae. This is the amino acid sequence of a Klebsiella pneumoniae polypeptide of the invention
                                                                                                                                                                                                                                            New nucleic acid encoding a Klebsiella pneumoniae polypeptide, useful for
preparing a vaccine composition against Klebsiella pneumoniae.
                                                                                                                                                                                                                                                                                         Disclosure; SEQ ID NO 10616; 932pp; English.

The invention relates to Pseudomonas aeruginosa polypeptides and the polynucleotides encoding them. The sequences are useful in diagnosis and the theorem a parhological conditions, as molecular targets for diagnostics, prophylaxis and treatment of pathological conditions resulting from a prophylaxis and treatment of pathological conditions as applyeptide, for the ability to bind a P. aeruginosa nucleic acid, as components of effective antibacterial targets, as templates for accombinant or including anti-P. aeruginosa at argets for antibacterial drugs, including anti-P. aeruginosa drugs, as templates for recombinant components for diagnosis and/or treatment of P. aeruginosa-caused infection, and in detection of P. aeruginosa sequences or polypeptides, as target infection, and in detection of P. aeruginosa sequences or other sequences ABO64336 represent P. aeruginosa colypeptides of the invention. Note: The components of this patent did not form part of the printed continued in electronic format from USPTO at

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to isolated Acinetobacter baumannii mucleic acids. The A. baumannii nucleic acids and polypeptides are useful as reagents for disquosing a bacterial disease, as components of antibacterial vaccines, as targets for antibacterial drugs, to detect the presence of A. baumannii and other Acinetobacter species in a sample, in screening compounds for the ability to interfere with the A. baumannii life cycle or to inhibit A. baumannii infection, and as biocontrol agents for plants. The present sequence represents the amino acid sequence of an A. baumannii protein.

New nucleic acid encoding a Moraxella catarrhalis polypeptide, useful for
preparing a composition for diagnosing, preventing or treating infection
caused by Moraxella catarrhalis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1 MAGAKEIRTKIASVKSTQKITKAMEMVAASKWRKTQERMSSSRPYSETIRNVISHVSKAT 60
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         an Moraxella
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to an isolated nucleic acid encoding an Moraxella catarhalis polypeptide. The nucleic acid is useful for preparing a composition for diagnosing, preventing or treating infection caused by Moraxella catarhalis. The present sequence represents the amino acid sequence of a M. catarrhalis protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              61 IGYKHPFLVDREVKKVGMIVV:IDRGLCGGLNVNLFKTVLNEMKEWKEKDVSVQLSLIGS

The invention relates to isolated polymuclectide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain recention (FCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymuclectides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders of sites expressing (II). (I) and (II) are useful for treating disorders or polypeptide and polymuclectide sequences have applications in disorders prophysolable for generatic disorders or other traits to assess biodiversity represent conducts dependent on DNA and amino acid sequences. ABG00010-ABG30177 represent novel human diagnostic maino acid sequences of the invention. Note: The sequence data for this pattent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at the printed specification, but was obtained in the vivalences.
                                                                                                                                                                                                                                                                                                                                                                New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess biodiversity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim 20; SEQ ID NO 54840; 103pp; English.

The present invention relates to proteins from Neisseria gonorrhoeae. Also disclosed are the nucleic acid molecules encoding the proteins and antibodies that specifically bind to the proteins. The composition comprising the protein, nucleic acid or antibody is useful for the manufacture of a medicament for treating or preventing N. gonorrhoeae infection, this may be in the form of a vaccine or gene therapy. Sequences given in records ABP76736-ABP81046 represent nucleic acid molecules of the invention
                                                                                                                                                                                                                                                                                                                                                                                              New protein from Neisseria gonorrheae, useful for the manufacture of medicament for treating or preventing N. gonorrheae infection.
                                                                                                                           Antibacterial; infection; vaccine; gene therapy.

The invention relates to isolated polynuclectide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal crivity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in issue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations and to produce other types of data and products dependent on DNA and to amino acid sequences. ABG00010-ABG30377 reppresent novel human diagnostic mino acid sequences. ABG00010-ABG30377 represent novel human diagnostic patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at the printed specification, but was obtained in the way by the world the construction of the printed specification, but was obtained in the way obtained in the way obtained in the printed specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          42 SRPYSETIRNVISHVSKATIGYKHPFLVDREVKKVGMIVVSTDRGLCGGLNVNLFKTVLN 101
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                102 EMKEWKEKDVSVQLSLIGSKSINFFQSLGIKILTQDSGIGDTPSVEQLIGSVNSMIDAYK 161
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      162 KGEVDVVYLVYNKFINTMSQKPVLEKLIPLPELDNDELGERKQVMDYIYEPDAKVLLDNL 221
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess bloddiversity.
                                                                                                                                     Human; chromosome mapping; gene mapping; gene therapy; forensic; food supplement; medical imaging; diagnostic; genetic disorder.

ATP synthase gamma subunit atpG [imported] - Bacillus halodurans (strain C-125)
C.Species: Bacillus halodurans
C.Species: Bacillus halodurans
C.Species: Bacillus halodurans
C.Species: On-Dec-2000 #sequence_revision 01-Dec-2000 #text_change 09-Jul-2004
C.Accession: C84119
B.Takami, H.; Nakasone, K.; Takaki, Y.; Maeno, G.; Sasaki, R.; Masui, N.; Fuji, F.; Hirrentle: Complete genome sequence of the alkaliphilic bacterium Bacillus halodurans and A; Reference number: A83650; MUID:20512582; PMID:11058132
A; Accession: C84119
A; Residues: Drain any
A; Molecule type: DNA
A; Residues: 1-28s < cross - references: UNIPROT:Q9K6H4; GB:AP001519; GB:BA000004; NID:g10176109; PIDN:BAB07; A; Experimental source: strain C-125

"Complete genomic sequence of Pasteurella multocida Pm70.";

"Complete genomic sequence of Pasteurella multocida Pm70.";

"Droc. Natl. Acad. Sci. U.S.A. 98:3460-3465(2001).

"Gradient across the membrane. The gamma chain is believed to be important in regulating ATPase activity and the flow of protons through the CF(0) complex.

"CATALYTIC ACTIVITY: ATP + H(2)O + H(+)(In) = ADP + phosphate + H(+)(Out).

"SUBUNIT: F-type ATPases have 2 components, CF(1) - the catalytic core and CF(0) - the membrane proton channel. CF(1) has five subunits: alpha(3), beta(3), gamma(1), delta(1), epsilon(1). CF(0) has three main subunits: a band core and CF(1) and core and CF(1) and core alpha(3).

"SUBMATIY: Belongs to the ATPase gamma chain family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This SWISS-PROT entry is copyright.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   SUBUNIT: F-type ArPases have 2 components, CF(1) - the catalytic core - and CF(0) - the membrane proton channel. CF(1) has five subunits: alpha(3), beta(3), gamma(1), delta(1), epsilon(1). CF(0) has three main subunits a, b and c. SIMILARITY: Belongs to the ArPase gamma chain family.
                                                                                                     Gaps

The gamma chain is believed to be important in regulating ATPase activity and the flow of protons through the CF(0) complex.

CATALYTIC ACTIVITY: ATP + H(2)O + H(+)(In) = ADP + phosphate + H(+)(Out)

"Structural features of the gamma subunit of the Escherichia coli F(1)
ATPASS revealed by a 4.4-A resolution map obtained by X-ray
Proc. Natl. Acad. Sci. U.S.A. 96:13697-13702(1999).
-!- FUNCTION: Produces ATP from ADP in the presence of a proton
important in regulating ATPASS activity and the flow of protons
through the CF(0) complex.
-!- CATALYTIC ACTIVITY: ATP + H(2)O + H(+)(In) = ADP + phosphate +
H(+)(Out).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     "Genome sequence of Shigella flexneri 2a: insights into pathogenicity through comparison with genomes of Escherichia coli K12 and 0157,"; Nucleic Acids Res. 30:4432-4441(2002).

Sequence 2848, Application US/09540236

Patchin Vo. 6673910

GENERAL INFORMATION:

APPLICANT: Gary L. Breton et al.

APPLICANT: Gary L. Breton et al.

TITLE OF INVENTION: NOCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO MORAXELLA CATARF

TITLE OF INVENTION: FOR DIAGNOSTICS AND THERAPEUTICS

FILE REFERENCE: 2709.2005-001

CURRENT FILING DATE: 2000-04-04

NUMBER OF SEQ ID NOS: 3840

SEQ ID NO 2848

LENGTH: 309

TYPE: PRI
                                                                                                                                                                                                                                                                                                                                         US-05-328-352-4894
